

## Tata Concept S

The Tata Concept S is a power-packed combination of a powerful engine, superior acceleration, an edgy exterior design, sporty interiors and appealing colours. It is based on the Tata Indica Vista platform.

### Powertrain

A 1.3 Litre SDE engine on the Concept S puts out a power of 70 kW @ 4000 rpm and a healthy 200 Nm of torque at 1500 rpm. The quick & precise steering rack, the retuned and beefed up suspension and 205/40 R17 tyres make it an excellent handler.

### Edgy Design

The design of the Concept S is wider with a wedge-like stance which is accentuated by customised graphics giving it an edgy and razor sharp persona. The subtle aluminium accents connote a sense of precision and performance that is machine like, while the red accents give it a sporty flair. The headlamps feature a metallic brow on the top intended to give it a more purposeful demeanour. The lower grille is surrounded by a polished black lip and is flanked by signature LED day time running lamps. The swooping side sills add to the dynamism and make the car look fast, even when standstill. At the rear, the spoiler and the subtly restyled bumper give the car a nice squat stance and the stylized LED tail lamp cluster make the rear look racy.

### Sporty Interiors

Sporty race bucket seats clad in black leather show that the Concept S is serious business. The smaller diameter sporty steering wheel and shifter scream performance. The black themed interior is subtle but has the right elements to make it seriously sporty. The entire approach of the colour and trim treatment, both on the inside and outside, give it a race-bred version look.

**Standard / Optional Features**

- ABS with EBD
- Fully automatic temperature control
- Four-way seat adjustment
- Immobiliser
- Power windows
- Touch screen music system
- Alloy wheels
- Socket for mobile charger
- Power steering
- Navigation system
